Yellowfin Model Development

First Model Runs and Ideas to Explore

Arni Magnusson

SPC PAW Meeting
26 March 2026, Nouméa

Model development

Pacific Community
Communauté du Pacifique

CPUE

1. Alternative indices
2. Time-varying CV

Movement

3. SEAPODYM coefficients

Fisheries

4. Convert weight comps to length comps
5. Combine fisheries
6. Lower effective sample size in general
7. Analyze data conflict, identify and test different approaches
8. Possibly reduce sample size in regions without otolith data
9. Consider different scenarios for Indonesian catches

Selectivity

10. Length-based

Natural mortality

11. Different levels of M
    (continuous or discrete)

Growth

12. Different levels of k
    (continuous or discrete)
13. Richards curve

Tags

14. Mixing period for each release group

Spatial structure

15. Consider single-region or equatorial model
16. Simplify regional structure for bigeye
